1. Overview

Model Launch Control is a web-based dashboard for tracking the tasks, deadlines, and progress involved in launching one or more “models” — think of each model as a project, release, or initiative with its own checklist. It is designed to give a team a single, visual source of truth for how close each launch is to being ready.

The dashboard runs entirely in your browser and can optionally sync to the cloud when you sign in, so your data follows you between devices. If you choose not to sign in, the dashboard works in a local preview mode using your browser only.

1.1 What You Can Do

- Create and track multiple models (projects), each with its own task checklist
- Set priorities, due dates, and notes on individual tasks
- Monitor progress with KPI cards, progress bars, and a completion ring
- Filter, search, sort, and bulk-edit tasks
- Compare two models side by side
- Archive completed or paused models without losing their data
- Import and export checklists as Excel workbooks or PDF files
- Switch between dark and light themes
- Sign in to sync your dashboard across devices, or work locally without an account

Tip: Everything in this manual reflects the dashboard's current on-screen labels and icons, so menu names below match exactly what you'll see in the app.

2. Getting Started

2.1 Opening the Dashboard

When you open the page, the dashboard loads immediately with sample preview data so you can explore it right away — you do not need to sign in first. A “LIVE” badge in the top right pulses to show the dashboard is active, and a small timestamp shows when the data was last updated.

If you stay signed out for about 10 seconds, the dashboard will gently prompt you to sign in or create an account. You can dismiss this and continue browsing locally at any time.

2.2 Creating an Account / Signing In

Click the gold Login button in the header to open the sign-in panel.

1. Choose the “Sign In” tab if you already have an account, or “Create Account” to register.
2. Enter your email address and password (passwords must be at least 6 characters).
3. Alternatively, click “Sign in with Google” to use a Google account.

4. If you forget your password, use the “Forgot password?” link on the Sign In tab to receive a reset email.

Once signed in, your model and task data is saved to the cloud automatically and will be available the next time you sign in from any device.

2.3 Working Without an Account

You can use the entire dashboard without signing in. In this local preview mode, your changes are kept in your browser only — they will not be available on another device and may be lost if you clear your browser data. Sign in at any time to move to cloud-saved mode.

3. Dashboard Overview

The main dashboard is organized into a few key areas, from top to bottom:

Header	Branding, live status, sign-in/account menu, theme toggle, Export, and Import controls.
KPI Cards	Four summary cards showing totals across all your models: Total Tasks, Completed, Pending, and Overall Progress.
Models In Progress	A grid of cards, one per active model, each showing a progress bar and quick stats.
Task Checklist	The detailed, line-by-line task list for whichever model is currently selected.
Compare View	An optional side-by-side comparison of two models' checklists.
Footer	Overall completion ring and basic page info.

3.1 KPI Cards

The four cards at the top of the dashboard summarize progress across every active (non-archived) model:

- **Total Tasks** — the combined number of tasks across all models.
- **Completed** — how many of those tasks are marked done.
- **Pending** — how many are still outstanding.
- **Overall Progress** — the completion percentage across all models combined.

3.2 Model Cards

Each model you create appears as its own card in the “Models In Progress” section. A model card shows:

- The model's name and, if set, its target launch deadline

- A colored progress bar showing percentage of tasks completed
- Counts of completed and pending tasks for that model

Click anywhere on a model card to open that model's detailed Task Checklist below.

Deadline text on a model card changes color as the date approaches: it appears in the normal muted color when there's plenty of time, amber when the deadline is coming up soon, and red if the deadline has passed.

4. Managing Models

4.1 Adding a New Model

1. In the “Models In Progress” section, type a name into the “New model name...” field.
2. Optionally, click the date field and choose a target launch date.
3. Click “Add Model” (or press Enter in the name field) to create it.

The new model immediately appears as a card and as a tab in the Task Checklist section below, ready for you to start adding tasks.

4.2 Switching Between Models

Use the row of tabs above the Task Checklist to switch which model's tasks you're viewing and editing. The active tab is highlighted in gold. This tab bar sticks to the top of the window as you scroll, so you can always see which model you're working on and switch quickly.

4.3 Setting or Changing a Model's Deadline

With a model selected, click “Set Deadline” (it will read “Edit Deadline” once a date exists) above the task table. Choose a date and click “Save Changes,” or click “Clear Date” to remove it. A small ✕ next to the button also lets you clear the deadline directly.

4.4 Archiving a Model

Archiving sets a model aside without deleting it — useful once a launch is complete or on hold. Archived models are removed from the main dashboard and KPI totals but can be restored at any time.

1. Select the model's tab in the Task Checklist section.
2. Click the “Archive” button.
3. Confirm the action in the dialog that appears.

To view archived models, open the account menu (click your user badge in the header) and choose “Archived.” A small badge shows how many models are currently archived. From the Archive view, you can restore a model back to the active dashboard or delete it permanently.

4.5 Deleting a Model

Deleting a model permanently removes it and all of its tasks. This cannot be undone.

1. Select the model's tab.
2. Click "Delete Model."
3. Confirm the action — you will be warned that this is permanent.

4.6 Comparing Two Models

The Compare view lets you view two models' checklists side by side, which is useful for checking whether similar launches are following the same steps.

1. Scroll to the "Compare Models" panel.
2. Choose a model in each of the two dropdown selectors.
3. Review the combined task list, which lines up matching tasks between the two models and shows completion stats for each.

5. Working with Tasks

5.1 Adding a Task

1. Select the model you want to add a task to.
2. Type the task description into the "Type a new task and press Enter..." field.
3. Optionally, enter a position number in the "Pos." field to insert the task at a specific spot in the list rather than at the end.
4. Press Enter or click "Add Task."

Keyboard shortcut: press **N** at any time (outside of a text field) to jump straight to the new-task input.

5.2 Marking Tasks Done or Pending

Click the status chip in a task's row (it reads "Pending" or "Done") to toggle its completion state. Completed tasks move into a collapsible "Completed" section beneath the active list, keeping your pending work front and center.

5.3 Setting Priority

Each task has a priority badge reading HIGH, MED, or LOW. Click the badge to cycle through the three levels. Tasks can also be filtered or sorted by priority (see Section 6).

5.4 Editing a Task's Name

1. Click the pencil (✎) icon in the task's Actions column.
2. Edit the text in the inline field that appears.
3. Press Enter or click the checkmark to save, or press Escape / click the × to cancel.

5.5 Reordering Tasks

You can reorder tasks two ways:

- Drag and drop a task row to a new position in the list.
- Use the ↑ and ↓ buttons in the Actions column to nudge a task up or down one position at a time.

5.6 Deleting a Task

Click the ✕ icon in the task's Actions column and confirm. This permanently removes the task from the model.

5.7 Task Notes

Use notes to attach extra context, internal links, or details to a specific task without cluttering the task name.

1. Click the notes icon () next to a task.
2. Type or paste your note into the text box.
3. Click "Save Notes."

Tasks with a saved note show a highlighted notes icon so you can spot them at a glance.

5.8 Task Deadlines

In addition to a model-level deadline, individual tasks can have their own due date.

1. Click the calendar icon next to a task.
2. Pick a date in the popup.
3. Click "Save Changes," or "Clear Date" to remove an existing task deadline.

Task deadlines are color-coded the same way model deadlines are: neutral when there's time, amber when due soon, and red once overdue.

6. Filtering, Searching & Sorting

6.1 Filter Buttons

Above the task table, filter buttons let you narrow the visible list to:

Filter	Shows
All	Every task in the current model
Done	Only completed tasks
Pending	Only outstanding tasks
High Priority	Tasks marked HIGH
Medium	Tasks marked MED
Low	Tasks marked LOW
 Critical	High-priority tasks that are still pending, highlighted in red for urgent attention

Each filter button shows a live count of how many tasks currently match it.

6.2 Searching Tasks

Type into the search box to instantly filter the task list to matching task names. Press **/** from anywhere on the page to jump straight to the search box, and **Esc** to clear the search and any active selections.

6.3 Sorting

Click any sortable column header — #, Task Description, or Priority — to sort the list by that column. Click the same header again to reverse the sort direction. An arrow icon next to the header shows the current sort direction.

7. Bulk Actions

To act on several tasks at once:

1. Check the checkbox on each task row you want to include, or use the checkbox in the table header to select every visible task.
2. A bulk action bar appears, showing how many tasks are selected.
3. Choose an action:
 - Mark Done — marks all selected tasks complete
 - Mark Pending — marks all selected tasks incomplete
 - Move to Top — moves the selection to the top of the list
 - Move to Bottom — moves the selection to the bottom of the list
 - Delete Selected — permanently deletes the selected tasks

Click “Clear Selection” to deselect everything without taking an action.

8. Import & Export

8.1 Exporting All Models

Click the gold “Export” button in the header to export every model at once. A dropdown offers two formats:

- **Export as Excel** — downloads a workbook with one sheet per model, including task names, priority, status, notes, and dates.
- **Export as PDF** — downloads a print-ready PDF checklist covering all models.

8.2 Exporting a Single Model

With a model selected in the Task Checklist section, click the “Export” button just above the task table to export only that model's checklist as Excel or PDF, using the same two options described above.

8.3 Importing from Excel

You can bring tasks in from a spreadsheet in two ways:

Import into the whole dashboard

Use the “Import” button in the header to upload an Excel workbook. This adds any new models and tasks found in the file while keeping your existing data intact — it will not overwrite or duplicate what's already there.

Import into the current model

With a model selected, use the “Import Excel” button above the task table to add tasks from a spreadsheet (.xlsx, .xls, or .csv) directly into that model.

When preparing a spreadsheet for import, keep one row per task with clear columns for the task name, priority, and completion status; the dashboard will recognize common variations of these column headers automatically.

9. Account & Data Management

9.1 The Account Menu

Once signed in, click your user badge (avatar and email) in the header to open the account menu, which contains:

Menu Item	What it does
Archived	Opens the Archive view to see, restore, or permanently delete archived models
Fresh Start	Permanently deletes all models and tasks, returning to a blank dashboard
Undo	Reverses your most recent change (appears only when an undo is available)
Sign Out	Signs you out of your account

9.2 Undo

Most changes — completing a task, deleting a task, reordering, and similar actions — can be undone. Click “Undo” in the account menu, the Undo button on the confirmation toast that appears after a change, or press **Ctrl+Z** (or **⌘+Z** on Mac) anywhere outside a text field.

9.3 Fresh Start

“Fresh Start” clears every model, task, deadline, and archive entry, returning the dashboard to a completely blank state. Because this is permanent and cannot be undone, you will be asked to confirm before anything is deleted.

9.4 Theme

Click the “Theme” button in the header to switch between the dark (charcoal and gold) and light (white and gold) appearance. Your preference is remembered for future visits.

9.5 Staying in Sync

While signed in, your changes save automatically in the background, and the “Last updated” timestamp in the header reflects the most recent save. If your connection drops, the dashboard keeps working locally and will let you know that your changes are saved on your device for now until the connection is restored.

10. Keyboard Shortcuts

These shortcuts work anywhere on the dashboard except while typing in a text field (unless noted):

Shortcut	Action
N	Jump to the “new task” input field
/	Jump to the search box
Esc	Clear search, clear task selection, and close open menus or dialogs
Ctrl+Z (⌘+Z on Mac)	Undo the most recent change
Enter	Confirm/save the field currently being edited (task name, new task, new model)

11. Tips & Best Practices

- Use the “ Critical” filter regularly to surface high-priority work that's still outstanding before a launch.
- Set both a model-level deadline and individual task deadlines for any task that has its own hard cutoff (e.g., a review or sign-off date).
- Archive models as soon as they're complete to keep your active dashboard and KPI totals focused on current work.
- Export a model to Excel before making major structural changes, so you have a backup checklist you can fall back on.

- Sign in (rather than staying in local preview mode) if you want your dashboard available on more than one device, or if multiple teammates need to see the same data.
- Use notes for context that would otherwise clutter a task name — links, owners, or acceptance criteria are good candidates.

12. Troubleshooting

Issue	What to do
Sign-in button doesn't respond / sign-in fails	Check your internet connection. If sign-in services are unavailable, the dashboard will tell you and continue to work in local preview mode; your changes are saved on your device and you can sign in again later.
Changes don't seem to be saving	Look at the “Last updated” time in the header. If it isn't updating, your connection may be unstable; the dashboard will notify you and keep working locally in the meantime.
I deleted or changed something by mistake	Use Undo (Ctrl+Z / ⌘+Z, or the Undo option in the account menu) right away — undo is only available for your most recent change.
A model or task I deleted is gone for good	Deleting a model or task is permanent and is not recoverable, even with Undo, once you've made further changes afterward. Archiving (for models) is the safer alternative if you might need the data again.
My import didn't add anything	Confirm your spreadsheet has one task per row with recognizable column headers for task name, priority, and status, and that you're importing into the model you expect.
